

## Water Conservation Policy

Ref.- AIHE/2019-20/ECC Policy/002

Date-19/08/2019

Water conservation is a critical component of the Green Campus policy. The college has implemented rainwater harvesting systems to collect and utilize rainwater, thereby reducing reliance on municipal water supplies. Moreover, water-efficient fixtures and a robust waste management system help minimize water wastage. The campus also focuses on maintaining green landscapes, which are irrigated using treated wastewater, thus promoting a sustainable cycle of water use.

The institution has established a water conservation and management policy to use water resources efficiently, guided by the following policies and regulations:

- **Ensure Continuous Water Supply:** The campus guarantees a reliable water supply by storing water from sump and borewells in overhead tanks.
- **Reduce Water Wastage:** Measures are taken to minimize water wastage by checking and sealing leaks, installing pressure-reducing valves, flow restrictors, and aerator taps where necessary.
- **Rainwater Harvesting:** Rainwater is collected from roof surfaces and redirected to tanks or deep pits. It is then allowed to percolate into the ground to replenish groundwater levels.
- **Awareness About Water Conservation:** Awareness programs are conducted at all levels to emphasize the importance of water conservation and address water scarcity. Signboards promoting water-saving practices are placed near water usage points to encourage future water conservation.
